## ABSTRACT

A portable telephone (1a) includes a main unit case (10) and an antenna element (20a). The antenna element (20a) includes a meander line antenna (21) as the first antenna unit arranged within the main unit case (10) and formed to extend in one direction, and a second antenna unit (22) extending substantially orthogonal to the extending direction of the meander line antenna (21), and arranged projectable from the main unit case (10), having an electrical length of approximately  $(\lambda/2) \times A$  (A is an integer), and coupled to the meander line antenna (21).
